

FASHIONABLE REALTIME: The 5,000 most frequent words in English

Fashionable Realtime for Steno Writers focuses generally on the most frequent English words. The following list was derived from thousands of English publications worldwide, including newspapers, periodicals such as *Life* and *Time* magazines, textbooks, the Holy Bible, fictional works, even romance novels. Anything written and published was harvested in huge numbers. Raw text was input to a database and analyzed without bias. The result was a fascinating cross-section of what constitutes the most commonly used English in modern life, and the backdrop for my research.

There is a twist, though: Court reporters usually write unpondered and unscripted words — not published material. (There is no collection available of this specifically, but I'm working on it!) This explains why the \$ symbol appears below. Clearly the collection represents printed language, not uttered language. Still, we might equate \$ to the frequency of the spoken *dollars*. Numbers, too, appear on the list, since after all, they are still words. Therefore we would take occurrences of, say, 5, and add them to the total number under *five* to get the real frequency of the word “*five*”.

An important consideration in exploring word frequency for our profession is the arrival of new words in common parlance or the repositioning of some words on the list, depending on your geographic location or at what point in time. An example might be

“terror(ist)” which occurred only on the final page of the 21 pages that follow, since this list was created pre-September 11. The most frequent words for stenographic reporters therefore are always liquid, ever affected by culture, by history, and by life itself.

Large figures after each headword represent the number of times the word occurred in the entire survey. Boldfaced oddities are entries representing computer-generated orthographical components of other words. Thus **ve** represents the frequency of ~ve as a contraction of pronouns *I*, *you*, and *we* which are listed separately.

Some words appear more than once — in different tenses or as different parts of speech. Numerous entries suggest that materials used were largely British, not North American (e.g. *Coventry* appears but not the ubiquitous *Dallas*. Similarly, *lawyer* appears, but *attorney* had no place among the top 5,000.) I regret that I have likely missed a few capital letters for proper nouns, but I hope to catch them on the next session.

Enjoy the list, and ask me if anything has you perplexed.

Denis Thievin
